PROFILE SUMMARY

Full Stack Java Developer with expertise in designing scalable **microservices** using **Spring Boot, AWS, and Kafka**. Proficient in **RESTful API Development, API security (JWT, OAuth2), event-driven architecture (Kafka), and DevOps (Terraform, Docker, AWS CI/CD)**. Passionate about performance optimization, cloud-native development, and delivering high-quality solutions.

EXPERIENCE

- Developed and secured **RESTful APIs** using Spring Boot and **Spring Security** with **JWT** token-based authentication.
- Implemented **CRUD operations** for a car module, including **search functionality** and **bulk upload features**.
- Designed and implemented a system for **customer visit request bookings** with agent allocation and **notifications via SMS and WhatsApp**.
- Done **DevOps** tasks to deploy and manage applications on **AWS services (EC2, S3, Elastic Beanstalk, IAM, VPC)**.

PROJECTS

TrueCar | Spring Boot, MicroServices, Kafka, Spring Security, JWT, Angular

- **Developed Backend Services:** Designed and implemented robust **RESTful API** services using **Spring Boot and Java**, significantly enhancing system performance and reducing response times for user requests.
- Implemented CRUD operations for car module, including **search functionality** and **bulk upload** features.
- **Security Implementation:** implemented **authentication** and **authorization** using **spring security** and **JWT**.
- **Event-Driven Architecture:** Used **Kafka** for essential functionalities such as **triggering SMS and email notifications**, and **publishing an Order Created event** for downstream processing.
- **API Design and Documentation:** Designed and documented APIs using **Swagger UI**, ensuring clear API contracts and seamless integration for developers.
- Integrated a system for customer visits request with agent allocation and notifications via SMS and WhatsApp.

Dev-ops Implementations | AWS, TERRAFORM, EC2, S3, VPC, DOCKER,

- Automated infrastructure deployment using **Terraform**, provisioning **EC2, VPC, Security Groups**, and **RDS**.
- Deployed and managed Spring Boot microservices on **AWS EC2**, integrated with **Auto Scaling** and **Load Balancer**.
- Used **AWS Lambda** for event-driven processing and **EBS** for persistent data storage.
- Configured a **secure VPC setup** with private/public subnets and security best practices.

TECHNICAL SKILLS

Programming Languages: Java, SQL (PostgreSQL), JavaScript, TypeScript, HTML/CSS, C/C++

Frameworks & Libraries: Spring Boot, Hibernate, Angular, JUnit, Mockito, Apache Kafka Clients,

Bootstrap

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, RDS, VPC, IAM, Lambda, API Gateway), Terraform, Docker,

Kubernetes, Jenkins, CI/CD pipelines

Developer Tools: Git, Maven, IntelliJ, VS Code, Eclipse, STS

Others: RESTful APIs, Microservices, Design Patterns, Agile, Security Best Practices, Performance Optimization
